

Business Requirements Document (BRD)

Business Problem

Employee attrition and workforce dissatisfaction are major challenges faced by organizations. High attrition rates can increase hiring costs, reduce productivity, and impact overall team performance. HR teams often require better visibility into workforce trends in order to make informed decisions related to employee engagement, retention, and workforce planning.

The organization requires a centralized analytics system that can help identify workforce patterns, monitor employee-related metrics, and support HR decision-making using data-driven insights.

Project Purpose

The purpose of this project is to develop a Workforce & Employee Analytics Intelligence System that analyzes employee-related data and generates meaningful workforce insights for HR operations and management teams.

The system is intended to assist in:

- understanding employee attrition patterns
- identifying workforce risk factors
- monitoring employee satisfaction and engagement
- supporting workforce planning and reporting

Business Requirements

The system should be able to:

Employee Attrition Analysis

- Identify departments with higher attrition rates
- Analyze the impact of overtime on employee retention
- Study relationships between salary, experience, and attrition
- Compare attrition trends across job roles and age groups

Workforce Insights

- Analyze employee distribution across departments
- Monitor workforce demographics and experience levels
- Evaluate work-life balance and job satisfaction trends
- Identify employee engagement patterns

Reporting & Visualization

- Generate dashboards for HR reporting
- Present workforce KPIs in a clear visual format
- Support decision-making through data insights
- Provide easy-to-understand workforce summaries

Predictive Analytics

- Predict possible attrition risks using employee-related factors
- Identify employees who may require engagement support
- Support proactive HR decision-making

Key Performance Indicators (KPIs)

The following KPIs will be analyzed in the project:

- Employee Attrition Rate
- Overtime Percentage
- Job Satisfaction Score
- Work-Life Balance Rating
- Average Monthly Income
- Department-wise Attrition
- Employee Retention Trends
- Workforce Distribution by Job Role

Tools & Technologies Used

- Excel — Data Cleaning & Preparation
- SQL — Data Querying & Analysis
- Python — Analytics & Predictive Insights
- Power BI — Dashboard & Visualization
- Jira — Workflow & Sprint Management
- Confluence — Documentation & Reporting

Expected Outcome

The final system is expected to provide actionable workforce insights that can help HR teams better understand employee behavior, improve workforce planning, and support employee retention strategies through data-driven analysis.
